

Case study 9:-

Character Encoding Utility:- A software company is developing a keyboard utility. Accept a character and display its ASCII value for internal processing.

Algorithm – Character Encoding Utility

1. Start.
2. Declare a character variable ch.
3. Input a character from the user.
4. Convert the character to its ASCII value.
5. Display the ASCII value.
6. Stop.

Pseudocode:-

BEGIN

DECLARE ch AS CHARACTER

INPUT ch

PRINT "ASCII Value = ", ASCII(ch)

END

Test cases:- input/output combination.

```
PS C:\Users\khush\Desktop\PROJECT 1> gcc CASE_study_9.c -o CASE_study_9 ; if ($?) { .\CASE_study_9 }  
enter the character P  
80  
PS C:\Users\khush\Desktop\PROJECT 1> █
```

```
PS C:\Users\khush\Desktop\PROJECT 1> gcc CASE_study_9.c -o CASE_study_9 ; if ($?) { .\CASE_study_9 }  
enter the character A  
65  
PS C:\Users\khush\Desktop\PROJECT 1> █
```

```
PS C:\Users\khush\Desktop\PROJECT 1> gcc CASE_study_9.c -o CASE_study_9 ; if ($?) { .\CASE_study_9 }  
enter the character R  
82  
PS C:\Users\khush\Desktop\PROJECT 1> █
```
