

Case study 4:-

Currency Exchange System:- travel agency needs to convert Indian Rupees in US Dollars before issuing foreign exchange. Assume 1 USD = ₹86.

Algorithm – Currency Exchange System

1. Start.
2. Declare variables: inr, usd.
3. Input the amount in Indian Rupees (INR).
4. Assume the exchange rate:
 - 1 USD = 86 INR
5. Calculate the amount in USD:
 - $usd = inr / 86$
6. Display the amount in USD.
7. Stop.

Pseudocode:-

BEGIN

DECLARE inr, usd AS FLOAT

INPUT inr

$usd = inr / 86$

PRINT "USD = ", usd

END

Test cases:- input/output combination.

```
PS C:\Users\khush\Desktop\PROJECT 1> gcc CASE_study_4.c -o CASE_study_4 ; if ($?) { .\CASE_study_4 }  
enter the total_amount 17200  
total_USD=200  
PS C:\Users\khush\Desktop\PROJECT 1> █
```

```
PS C:\Users\khush\Desktop\PROJECT 1> gcc CASE_study_4.c -o CASE_study_4 ; if ($?) { .\CASE_study_4 }  
enter the total_amount 18200  
total_USD=211  
PS C:\Users\khush\Desktop\PROJECT 1> █
```

```
PS C:\Users\khush\Desktop\PROJECT 1> gcc CASE_study_4.c -o CASE_study_4 ; if ($?) { .\CASE_study_4 }  
enter the total_amount 19500  
total_USD=226  
PS C:\Users\khush\Desktop\PROJECT 1> █
```
